

Data Wrangling Contents

Rojesh Shikhrakar • 27 Apr

This week focuses on building a strong foundation in data wrangling through hands-on problem-solving, guided practice, and supplementary learning resources. Students are expected to actively engage with the material and complete the required tasks prior to the online session.

Core Learning Activity

Students are required to complete the Week 1 Data Wrangling problem. The problem includes detailed instructions and is designed to introduce key concepts in cleaning and preparing data.

This activity must be completed before the scheduled online session, as it will form the basis for further discussion and learning.

Practice and Skill Development

To strengthen practical understanding, students are strongly encouraged to complete the Kaggle course on data cleaning:

<https://www.kaggle.com/learn/data-cleaning>

This course provides hands-on exposure to real-world data cleaning techniques and offers a certificate upon completion.

- Estimated completion time: 4–6 hours

Assessment Component

Following the completion of the assignment, students are required to attempt the associated quiz to be released tomorrow. This will help reinforce key concepts and assess understanding of data wrangling techniques.

Supplementary Resources:

Background and practice

- **Preprocessing with Pandas:** Covers essential data cleaning and transformation techniques using Pandas to prepare raw data for analysis.

- Data Wrangling on SDOT : Practical notebook demonstrating real-world data wrangling using the SDOT dataset.
- Pandas Plotting: Plots, Histograms and Correlation Matrices: Introduces basic data visualization and exploratory analysis using Pandas plots and correlation tools.
- Pandas Data Manipulation: Focuses on reading datasets and performing fundamental data selection and manipulation operations in Pandas.

In-depth Reading

For a deeper understanding of data cleaning principles, from Python for Data Analysis Chapter 7.
