Go through the Claude with Anthropic API Course. You can complete the entire course and get certified, but for this week you must complete

- Accessing Claude with the API
- Prompt Evaluation
- Prompt Engineering Techniques
- Tool Use

You'll not be provided Claude API (too costly for experimentation) , you'll have to use free APIs from groq.com, Ollama, OpenRouter, Google AI Studio (Gemini), etc. Though the internals might be slightly different overall working is similar.

You are also encouraged to explore additional learning resources such as:

- YouTube tutorials on building Text-to-SQL agents
- Research papers on Text-to-SQL uploaded in the resource.
- Try to research different approaches and understand how modern AI systems generate, validate, and execute SQL queries.

Building with the Claude API

The anthropic course uses Claude API, that needs minimum \$5 credit to deposit :)
